

## Hashing Concepts (1)

- Use **hash table** to store dictionary pairs
- Use a hash function  $f()$ 
  - Map **keys** into **index** in a hash table
  - Element  $e$  has a key  $k$  and is stored in  $table[f(k)]$
- Complexity
  - To **initialize** an empty dictionary
    - $O(b)$  time where  $b$  is the number of positions
  - To perform **get()**, **put()**, and **remove()** operation
    - $O(1)$  time
